Ian Ward

Essential Details

High-level console user interface library for Python

LGPL

Unix-like OSes: Linux, OSX, (windows with Cygwin)

Urwid Development

<http://www.ohloh.net/p/urwid/contributors>

> 20 contributors over the course of the project

Mostly yours truly

About Myself

- Independent software developer

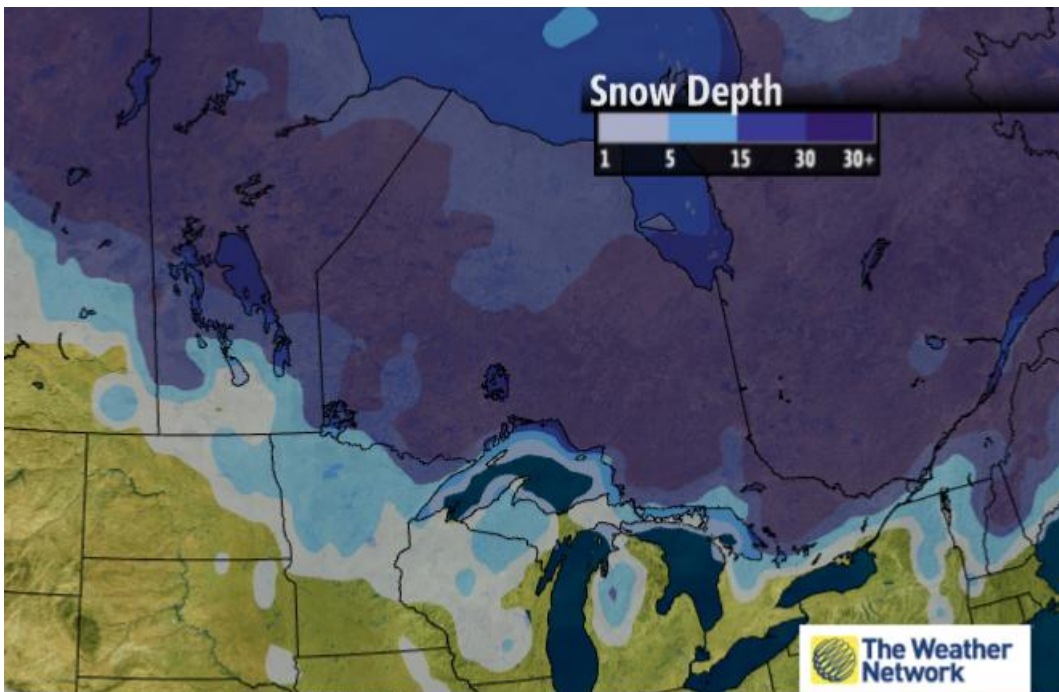

<http://genericconsulting.ca/>

Django, PostgreSQL, Python, C, ASM

- located near Ottawa, Canada

Snow Depth

Urwid Users

<http://excess.org/urwid/wiki/ApplicationList>

~ 20 projects listed, including

- bpython
- wicd
- pudb
- reportbug
- speedometer

PuDB 0.91 - The Python Urwid debugger - Hit ? for help - © Andreas Klöckner
2009 [PROCESSING EXCEPTION - hit 'e' to examine]

```
def simple_func(x):  
    x += 1  
  
    s = range(20)  
    z = None  
    w = ()  
  
    y = dict((i, i**2) for i in s)  
  
    k = set(range(5, 99))  
  
    try:  
> x.invalid  
    except AttributeError:  
        pass  
  
    #import sys  
    #sys.exit(1)  
  
    return 2*x  
  
def fermat(n):  
    """Returns triplets of the form  $x^n + y^n$   
    Warning! Untested with  $n > 2$ .  
    """  
* from itertools import count
```

Variables:

```
k: set  
s: list  
w: tuple  
  <empty>  
x: 11  
y: dict  
  0: 0  
  1: 1
```

Stack:

```
<module> debug_me.py:34  
>> simple_func debug_me.py:13
```

Breakpoints:

```
debug_me.py:26
```

```
Default
>>> print 'Hello world'
Hello world
>>> for x in xrange(1,100):
...     print x,
...
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36

2
>>> import os
>>> os.listdir('~/.irclogs/tweakers/')
```

```
os.listdir: (path)
|tweakers 17net      Freenode rid.py    Tweakers stats.cfg
```

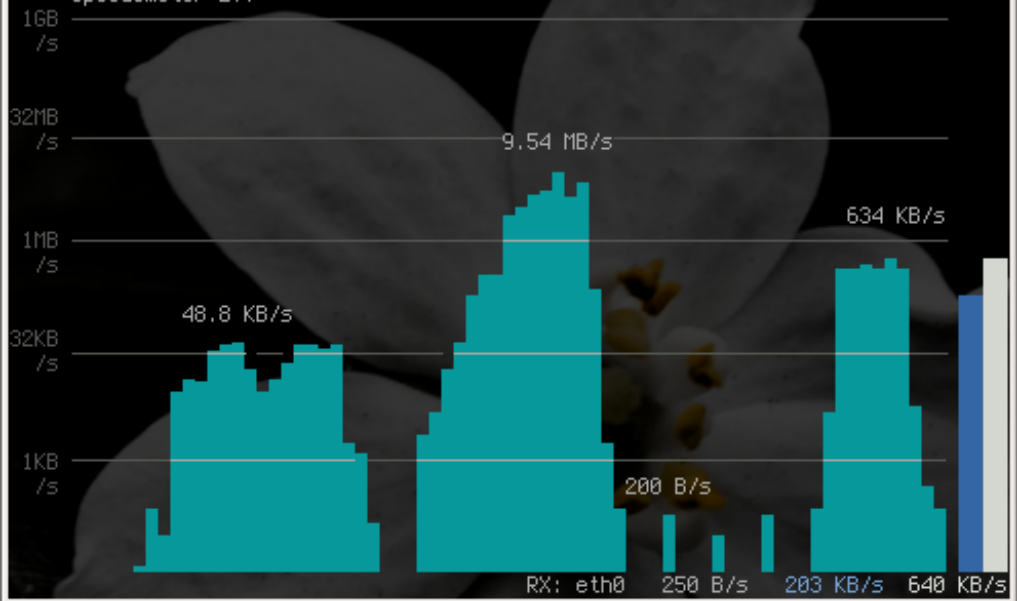

```
<C-d> Exit <C-r> Rewind <C-s> Save <F8> Pastebin <F9> Pager
```

Speedometer dark background example

Speedometer 2.7

Good Console Interfaces

Helps you write apps like: vim, mc, w3m, rtorrent, aptitude, tmux

Doesn't (yet) help you make silly ones (turbovision)

Goals

- Use the complete display area efficiently
- Sparse UI that stays out of your way
- Work well over ssh, even with high latency
- No particular GUI required, text console is fine

Alternatives

curses

- comes with python
- very low level

newt/snack

- some gui-like widgets

insults

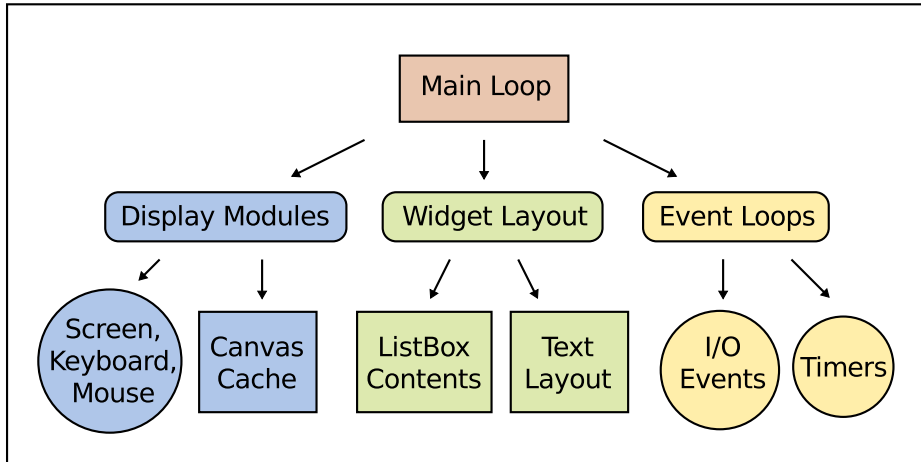

- well integrated with twisted

Urwid

- > 7 years
- reached 1.0 in 2011
- supports Python 2.4-2.7, 3.2+
- good Unicode support
- friendly 256/88 colour support
- twisted/glib event loop support
- separation of concerns from the start

The Reason Urwid Exists

I wanted to write a point of sale system

- Text Layout
- Input Handling
- Lists and Scrolling

Text Layout is Hard

Wrapping, alignment, clipping, double-width and zero-width characters

<http://excess.org/urwid/wiki/TextLayout>

- new data structure
 - maps 1d positions <-> 2d coordinates
- caching
- custom text layouts
- editing + cursor positioning

Input Handling is Hard

- curses doesn't work very well
 - many xterm key combinations unsupported
 - termcap / terminfo can't be fixed
- do it ourself
- minimize delay on ESC
- support all the key combinations I want

Lists and Scrolling are Hard

ListBox

- cursor key and page up/down handling
- relative focus position
- selectable/unselectable widgets

List Walker

- focus tracking
- widget content generation

Unicode is Hard

- extend text layout
- raw_display

Event Loops are Hard

MainLoop

- pass input from user to widgets
- draw widgets on the screen
- throttle screen resizing
- do the fast stuff first

Event Loops

- wait on IO
- timers
- notice when idle

Penultimate Slide

Consider making a console UI for your next app, even just as a second option.

Contribute to OSS or build your own OSS project. Lots of work but it can be very satisfying.
